

Fraction Review 2

$$\frac{2}{3} + \frac{1}{5} =$$

Always add in columns	Find a common denominator	
$\frac{2}{3} =$	$\times 5 \quad \frac{10}{15}$	$\frac{3}{5} + \frac{2}{7} =$
$+ \frac{1}{5} =$	$\times 3 \quad \frac{3}{15}$	
<hr/>	<hr/>	
	$\frac{13}{15}$	

Add the tops
(Don't add the bottoms)

$$\frac{1}{4} + \frac{1}{3} + \frac{1}{8} =$$

$\frac{1}{4} =$	$\times 6 \quad \frac{6}{24}$	$\frac{1}{6} + \frac{1}{4} + \frac{2}{3} =$
$\frac{1}{3} =$	$\times 8 \quad \frac{8}{24}$	
$+ \frac{1}{8} =$	$\times 3 \quad \frac{3}{24}$	
<hr/>	<hr/>	
	$\frac{17}{24}$	

Tip:
To find the least common denominator,
start with the largest denominator
and multiply it times 1, 2, 3, 4, 5, 6 ...
until you get a number that works.

$$5 + \frac{2}{3} + \frac{1}{4} =$$

(Don't put the fractions below the 5)

$5 =$	5	$3 \frac{9}{16} + 9 + \frac{3}{4} =$
$\frac{2}{3} =$	$\times 4 \quad \frac{8}{12}$	
$+ \frac{1}{4} =$	$\times 3 \quad \frac{3}{12}$	
<hr/>	<hr/>	
	$5 \frac{11}{12}$	

$$3 \frac{7}{9} + 2 \frac{5}{6} =$$

$$3 \frac{5}{6} + 9 \frac{4}{5} =$$
